I sampled the private water well at the James Phillips residence on the above date at 9:20 AM. This sample was taken at the request of the property owner. The location of this well is about 100 yards SSW of the SE corner of the subject site.

The 5" drilled well has been constructed within the past two years. The well casing is about 1' above the surface of the ground and has a seal and pitless adapter. the type of pump is a one-half horse submersible. The 80 gallon pressure tank was drained by pumping for approximately 20 minutes prior to sampling. K & K Well Drilling of Yorkville was the contractor for drilling the well. PVC electric conduit has been run from the basement of the residence to the well which would all but eliminate possible well contamination due to poor construction.
